

**IN THE DRAWINGS:**

A new Fig. 1 is submitted correcting a typographical error at item 44 -  
"INTO" is changed to "INFO".

## **REMARKS**

This application has been withdrawn from issue by the filing of this RCE to broaden the independent claims by deleting "electrophotographic" in the preamble. These claims are still allowable for the reasons previously noted in the Remarks portion of Amendment "A", for example.

The specification and drawing were amended to correct obvious typographical, nomenclature, or reference numeral errors.

Additional dependent and independent claims are added. Additional independent claim 32 distinguishes over Ogura, or Ogura combined with Swada, at least for the following reasons. Ogura turns on the main power source but does not have the selective activation recited in claim 32 wherein the controller is activated remotely by the controller power supply via the communication unit without operating the device control.

The newly added dependent claim 33 also distinguishes for the reasons noted with respect to claim 32.

Independent claim 34 distinguishes in a manner similar to claim 32 but also by reciting that the communication unit has a wake-on-LAN function. This function is described in Applicants' specification at page 8, lines 6-10. A wake-on-LAN function is explained in the internet pages indicated in Applicants' original specification at the middle of page 8.

Allowance of the case is respectfully requested.

Respectfully Submitted by,

(Reg. 28,982)
